

Papua Expeditions check-list of the birds of Papua

Version 1.4, March 30, 2008

Below we present a simple species-level check-list of the birds reliably recorded from Papua or Indonesian New Guinea up to December 31, 2007. We define Papua or Indonesian New Guinea as the region encompassed by the western half of the subcontinental island of New Guinea up to the border with Papua New Guinea at 141° longitude, plus the following groups of satellite islands: (1) the Raja Ampat archipelago (until recently generally referred to as the West Papuan Islands), including the main islands of Waigeo, Batanta, Salawati, Misool, Kofiau and Gebe; (2) the Geelvink Islands (also known as the Schouten Islands), including the main islands of Biak-Supiori, Numfor and Yapen; and (3) the Aru Islands.

The entire area under consideration here thus lies within the Republic of Indonesia, and with the exception of Gebe and Aru, which geopolitically are part of the Moluccas, conforms to the Papua Special Autonomous Region. We further follow the delineation of the New Guinea or 'Papuan' region as proposed initially by Mayr (1941), and perpetuated by Rand and Gilliard (1967), and Beehler *et al.* (1986). Classification, taxonomy and nomenclature generally follow Sibley and Monroe (1990; 1993), with detailed annotation of present deviations in species-level taxonomy and vernacular naming envisaged for future updates of this check-list. We indicate these author's orders, families, subfamilies and/or tribes, but omitted their suborders, infraorders, parvorders and/or superfamilies for the sake of simplicity. For taxa belonging to superspecies or allospecies, who's treatment at species level is not widely accepted, we have encoded this by the use of scientific trinomials and square bracketing of the binomen.

We list 679 bird species as having reliably been recorded in Indonesian Papua up to December 31, 2007. These include 42 Papua endemics, 279 regional New Guinea endemics, 251 widespread residents (at least 11 of which also have visiting migratory populations not included again in the ensuing category), 76 regular migrants, 28 vagrants, and a single recently introduced yet poorly established species.
